

— SOVEREIGN NATIONAL IDENTITY

# Digital Identity Infrastructure.

A sovereign identity foundation that brings citizen journeys, multi-modal biometrics, authority operations, trusted credentials and governed service use into one accountable national programme.

## ENROL

Capture quality-controlled identity evidence.

## OPERATE

Run the lifecycle with clear authority control.

## REUSE

Put verified identity to work safely.

## — ONE TRUSTED JOURNEY

# Identity is a programme, not a database.

A national identity programme has to work for the citizen applying, the officer capturing evidence, the authority making a decision and the services that later rely on the result. Axon connects those responsibilities into one governed lifecycle.

01

## Prepare

Start online, in an assisted channel or at a field enrolment point.

02

## Capture

Collect biographics, biometrics, documents and consent with quality in view.

03

## Assure

Search the population, handle potential duplicates and retain the decision.

04

## Issue and reuse

Allocate an ID, issue credentials and give approved services a governed answer.

### DESIGN PRINCIPLE

**One programme of record, with specialist products around it rather than disconnected channels creating their own version of the citizen.**

## — POLARIS · THE AUTHORITY WORKSPACE

# See and run the identity lifecycle from one operational centre.

Polaris gives authorised programme teams a clear view of enrolments, citizen records, ABIS work, approvals, National ID allocation and production operations. It is the authority's operational centre — not the citizen-facing experience and not the enrolment station.

## THE OPERATING MODEL

Give every role a meaningful workspace while keeping the programme's controls, evidence and accountable record intact.

BIOENROL + CIVIL ABIS

# Capture the right evidence. Decide before issuance.

BioEnrol guides face, fingerprints, iris, documents and signature into a quality-controlled enrolment record. Polaris makes the duplicate-search workflow operational, taking a submitted record through the programme's biometric assurance and decision process.

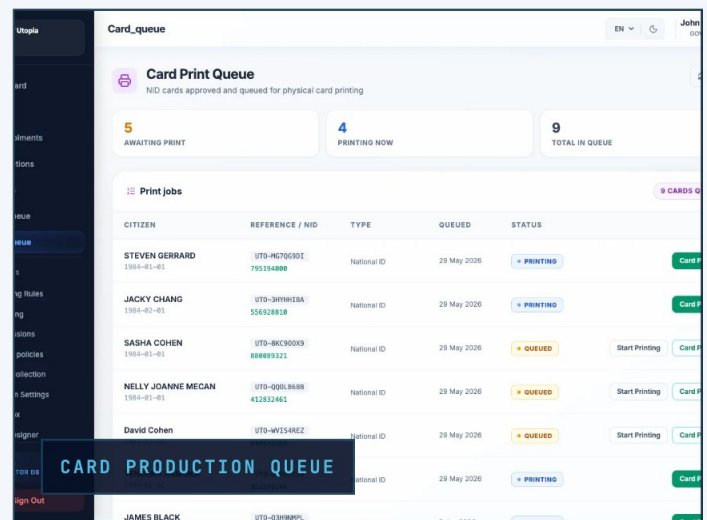

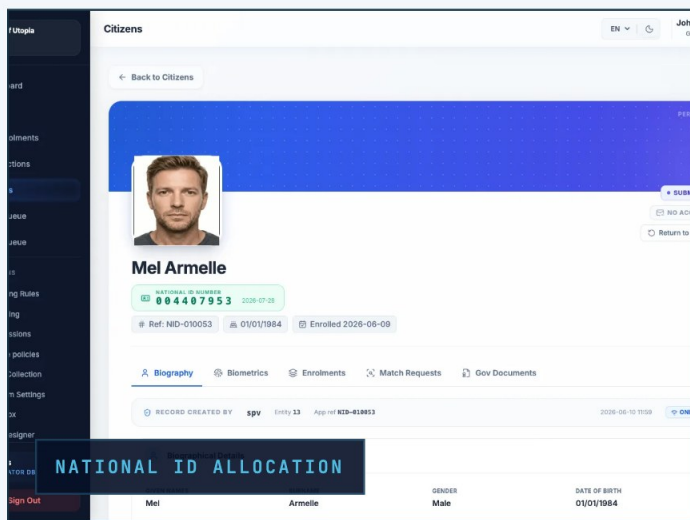

PROGRAMME CONTROL

**Face, fingerprint and iris can be combined according to policy, with quality and downstream match outcomes retained as evidence.**

— FROM APPROVAL TO CREDENTIAL

# Approve the identity. Allocate the number. Move the credential forward.

Once the programme's decision path is complete, Polaris manages the authority record and National ID allocation. It can then drive the physical-card production queue while GovPass supports the citizen's reusable digital credential journey.

## ONE AUTHORITY RECORD

The citizen record, ID allocation, enrolment history and credential operations remain accountable to the national programme.

— A CLEAR ROLE FOR EVERY PRODUCT

# Build the solution from products that know their job.

The programme does not need one monolith pretending to do everything. Axon connects specialist products around a controlled national identity lifecycle.

ENROL

BioEnrol

Guided multi-modal capture, quality review, document evidence and signed submission.

OPERATE

Polaris

Applications, ABIS workflow, citizen records, NID allocation and production operations.

ISSUE

GovPass

Citizen credentials, scoped verification and high-assurance signing for approved services.

EXCHANGE

X-Bridge

Governed exchange with authoritative sources and approved relying parties.

POLARIS · APPLICATION EVIDENCE BEFORE THE ENROLMENT APPOINTMENT

— TRUST HAS TO BE OPERABLE

# Keep consequential identity actions traceable and policy-led.

Sovereignty, legal authority, data protection, role-based access, audit, retention, resilience, inclusion and independent oversight are architecture decisions. They are not a checklist left for the end of implementation.

|         |                                 |                                                                                                        |
|---------|---------------------------------|--------------------------------------------------------------------------------------------------------|
| CONTROL | <b>Policy-defined access</b>    | Decide who may act, which information is released and the reason it is allowed.                        |
| DEPLOY  | <b>Sovereign options</b>        | Support on-premise, sovereign or national cloud, and hybrid models that fit the programme.             |
| REUSE   | <b>Minimum necessary answer</b> | Use GovPass and X-Bridge to provide approved outcomes rather than uncontrolled copies of the registry. |
