

DOCUMENT FORENSICS

RealDoc.

Inspect identity documents, PDFs and document images for tampering, alteration, forgery and document-liveness signals before they become trusted evidence.

FORENSIC

Built to examine the integrity of a submitted document.

LIVENESS

Detect photocopies, screens and stitched captures.

OPERATIONAL

Turns suspicious evidence into a clear review path.

CHECK THE EVIDENCE BEFORE IT IS TRUSTED

Not every convincing document is an authentic one.

A changed address, revised total, replaced name or composited image can enter a workflow as an otherwise ordinary PDF or photo. A photocopy, screen replay or stitched capture can look equally convincing. RealDoc assesses both document integrity and liveness so teams can investigate before an outcome depends on it.

01

Altered fields

Focus attention on evidence that may show changed dates, names, addresses, amounts or other material details.

02

Document liveness

Detect signs of a photocopy, screen replay or stitched document capture presented as an original.

03

Review-ready outcomes

Give risk and operations teams a structured signal to accept, request a replacement or escalate.

What RealDoc does

Combines alteration and forgery analysis with document-liveness detection for photocopies, screens and stitched captures.

What it does not do

RealDoc assesses the evidence document. It does not replace face liveness or the broader identity-verification journey.

MAKE FILE INTEGRITY PART OF THE DECISION

From uploaded file to a defensible next action.

Documents that matter in everyday workflows

Passports · national IDs · driving licences · proof of address · utility bills · invoices · statements · supplier evidence and compliance attachments.

Fit the control to the journey

01

Define document types, risk thresholds and the evidence a reviewer needs.

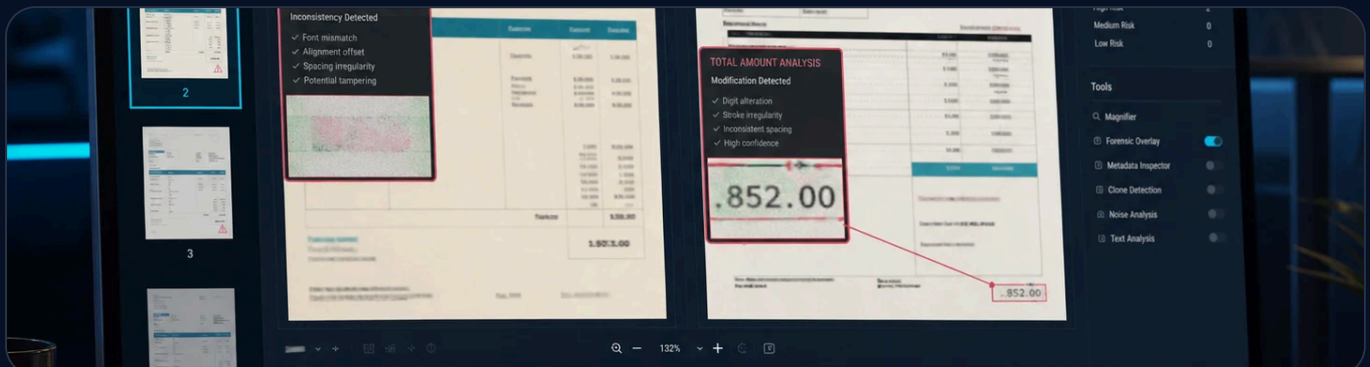

02

Route suspicious outcomes to review, replacement or an appropriate additional check.

03

Retain the decision evidence required for audit, assurance and programme improvement.

RealDoc helps teams test both the document itself and whether the original document is physically present, rather than treating a successful upload as proof.

— PUT DOCUMENT FORENSICS IN THE FLOW

Make altered evidence harder to accept.

Use RealDoc alongside your onboarding, credit, claims, compliance and customer-service workflows - with clear thresholds, reviewer routes and audit evidence.
